SUMMARY

Senior Java Backend Engineer with 18+ years of experience designing, developing, and scaling enterprise-grade REST APIs, cloud-native microservices, and distributed systems. Currently leading a team of 10 at Fidelity International, managing 150+ production APIs serving millions of financial transactions on AWS and Kubernetes. Proven expertise in cloud migration (Cloud Foundry to AWS/Kubernetes), API performance optimization, CI/CD automation, and infrastructure cost reduction. AWS Certified Developer – Associate. Seeking remote senior/lead backend or platform engineering roles in global product companies.

EXPERIENCE

Technical Consultant

Fidelity International

July 2022 – Present

- Architected and delivered 150+ production REST APIs across 8+ financial domains (accounts, funds, transactions, performance, attribution, breakdown) on AWS EKS and Kubernetes, serving 10+ downstream consumer applications handling millions of daily financial data requests.
- Led end-to-end cloud migration of 150+ APIs from Cloud Foundry (PCF) to AWS + Kubernetes over 12 months, eliminating legacy PaaS dependency, reducing infrastructure hosting costs by ~30%, and improving deployment frequency from bi-weekly to on-demand daily releases.
- Implemented Infrastructure as Code (IaC) using Terraform and Kustomize across 3 environments (dev, staging, production), reducing manual deployment errors by ~80% and cutting new environment provisioning time from 3 days to under 2 hours.
- Built and maintained CI/CD pipelines using Jenkins and GitHub Actions for 150+ microservices, automating build, test, containerization, and deployment to AWS EKS — achieving ~60% reduction in deployment cycle time and enabling zero-downtime production releases.
- Drove API performance optimization across 150+ endpoints, achieving ~40% reduction in average response latency through query optimization, connection pooling, and caching strategies, directly reducing monthly AWS compute costs by ~25%.
- Built polyglot backend services using Java Spring Boot, Python, and Node.js to support 10+ downstream consumers with varying protocol and format requirements, reducing new consumer onboarding time by ~50% per integration.
- Facilitated 10+ technical workshops and architecture review sessions with stakeholders across 3+ business units, onboarding 5+ new consumer applications and accelerating the cloud modernisation roadmap by 6+ months.
- Advised cross-functional teams on cloud-native architecture, AWS security best practices (IAM, VPC, Secrets Manager), and cost optimization strategies, maintaining 99.9% uptime SLAs across the global investment platform.

Associate Manager

Accenture

April 2015 – July 2022

- Designed and developed REST APIs using Spring Boot and Spring Data JPA to serve account holdings, fund transactions, and performance reports to UI consumers across financial reporting dashboards.
- Integrated backend services with Oracle 12c, delivering low-latency JSON responses optimised for high-frequency financial reporting queries.
- Configured CI/CD workflows using Jenkins and Bamboo, enabling automated, faster, and more reliable delivery of backend services across environments.

Senior Software Engineer

Nagarro

November 2014 – April 2015

- Completed enterprise Java technical onboarding program covering Spring Framework, REST API design, Hibernate ORM, SOLID principles, and microservices architecture aligned with Nagarro's delivery standards.
- Participated in code review workshops and internal knowledge-sharing sessions, building readiness for client engagement assignments in financial domain projects.

Senior Software Engineer

Genpact Headstrong

December 2011 – November 2014

- Designed and built a strategic post-settlement OTC derivatives reconciliation system for a global financial institution, matching and grouping journals across high-volume cash-settling derivative products — processing thousands of daily settlement records in a regulated environment.
- Built complex Sybase stored procedures, database objects, and triggers to automate multi-currency journal matching, exception grouping, and audit trail generation across 5+ derivative product types, reducing manual reconciliation effort by ~70%.
- Implemented AutoSys batch job scheduling to orchestrate 10+ dependent jobs across data ingestion, reconciliation processing, and exception reporting — improving settlement processing speed by ~40% and eliminating manual scheduling errors.
- Developed Perl ETL scripts for file-based integration between the reconciliation system and 3+ upstream trading platforms, enabling automated daily data feeds without manual intervention.
- Collaborated with operations, business analysts, and compliance teams across multiple geographies to validate reconciliation rules and ensure adherence to OTC derivatives post-trade regulatory standards.
- Led end-to-end UAT, performance testing, and production rollout of the mission-critical reconciliation system, ensuring zero data discrepancy in regulated settlement reporting.

Software Engineer

NexGen Consultancy

December 2009 – December 2011

- Designed and developed a full-cycle billing solution for 3+ state electricity boards, covering end-to-end workflows: meter reading collection, bill calculation, generation, deposit management, and automated reporting — processing billing data for thousands of consumers across multiple billing cycles.
- Built JAX-WS (Metro) SOAP web services to integrate the billing module with 5+ external heterogeneous systems, enabling cross-platform data exchange and reducing manual reconciliation effort by ~60%.
- Designed and optimised SQL Server stored procedures to handle high-volume billing transactions with accuracy during peak billing periods across multiple electricity board regions.
- Delivered the complete application as a single-developer ownership module, independently managing requirement gathering, system design, database schema, development, testing, and production deployment.

EDUCATION

Master of Computer Applications (MCA)

IMS College, UPTU University • 2007 – 2010 • 68%

B.Sc. (Hons) Mathematics

Kirori Mal College, Delhi University • 2003 – 2007 • 65%

CERTIFICATIONS

AWS Certified Developer – Associate

Amazon Web Services

SKILLS

Java (18+ yrs), Python, Node.js, SQL, Unix Shell Scripting

Spring Boot, Spring MVC, Spring Data JPA, Spring Integration, Hibernate, JAX-WS

AWS (EC2, EKS, S3, Lambda, RDS, IAM, CloudWatch), Kubernetes, Docker, Terraform, Kustomize, Cloud Foundry (PCF)

Jenkins, GitHub Actions, Bamboo, SonarQube, Git, Bitbucket, SVN

RESTful APIs, SOAP, Apache Kafka, JMS, IBM MQ

Oracle 12c, MySQL, Sybase, SQL Server

IntelliJ IDEA, Eclipse, JIRA, GitHub, Perforce, VS Code
